Call our Sales Team at 1-800-305-8117 if you are shipping to a residential address, school, military location, or internationally.

The ME-110MM is designed to hold various types of Mud Motors for service work. It features the same large foam filled rubber tires as the ME-110AT, which easily roll over gravel, grass, hoses, and concrete. Two of the wheels lock for maximum stability. The stand's mounting surface simulates a transom, both in angle and thickness, keeping the outboard naturally oriented while you work. The uprights are angled toward each other on either side of the engine to maximize accessibility. Includes the bolt holes fitting standard bolt-on outboard motors. There is a welded pan between the legs for tools/oil pans, etc. **The ME-110MM has a maximum weight capacity of 700 lbs**, due to the foam filled tires. *If you have a heavier mud motor please contact us for our other caster options, which will increase the weight limit.*
