These sturdy wall brackets are a great solution to a lack of storage space in your shop. Hold as many motors as you see fit because these brackets are designed with industrial strength for heavy commercial use. Fitting a 2" x 10" board (not included)*, each bracket has six mounting holes in the back for easy installation and three holes on the front panel to bolt in the board so that it doesn't move when you move engines. The brackets are made from a thick 7 gauge steel with a smooth black powder coat finish.

*Note: Load capacity is up to your discretion and should be based upon board length, type of wood, and wall strength. This product is intended for clamp-on outboards only.

Check out the [ME-165](#) for a lightweight outboard wall storage bracket designed for residential or light commercial use..
